## Contents

February 2009 Vol 14 No 1

### Purpose and procedure

1

### EBM notebook

2 Jottings ...

2 Delayed antibiotics for children with acute otitis media: is practice change sustainable?

4 Practice corner: should we screen all patients starting chemotherapy for chronic hepatitis B virus infection?

5 Evidence in context: one person's poison is another's acceptable risk

6 Letter: self-monitoring of blood glucose—caution warranted

### Evidently

7

### Therapeutics

8 Review: medication adjustment based on fractional exhaled nitric oxide did not prevent asthma exacerbations

9 Benefits of early intensive glucose control to prevent diabetes complications were sustained for up to 10 years

10 Benefits of tight blood pressure control to prevent diabetes complications were not sustained

11 A combination of telmisartan and ramipril increased renal outcomes in vascular disease or diabetes

12 General practitioners' advice to use topical rather than oral ibuprofen resulted in equivalent effects on chronic knee pain

13 Alexander technique lessons were effective for chronic or recurrent back pain at 1 year

14 Review: daily salmeterol increases non-fatal serious adverse events in chronic asthma

15 Review: faecal occult blood test screening reduces risk of colorectal cancer mortality

16 CD4<sup>+</sup> count-guided antiretroviral therapy interruption increased opportunistic disease and death more than continuous therapy in HIV

17 Active management of risk in pregnancy at term did not reduce caesarean delivery rates

18 Review: postmenopausal hormone therapy increases risk of stroke and venous thromboembolism but not coronary heart disease events

19 Review: an early invasive strategy has similar benefits in men and women with NSTEMI or unstable angina

### Diagnosis

20 A single measure of urinary neutrophil gelatinase-associated lipocalin was accurate for diagnosing acute kidney injury

### Prognosis

21 Review: people with epilepsy have higher risk of death by drowning than the general population

22 Review: vasomotor symptoms peak at 1 year after final menstrual period and may persist for many years

23 Excess mortality after HIV seroconversion has greatly decreased in the past 10 years

### Quality improvement

24 Physician training in the use of a decision aid increased patient participation in decision making for CVD prevention

### Clinical prediction guide

25 The San Francisco Syncope Rule did not accurately predict serious short-term outcome in patients with syncope

26 The Paediatric Appendicitis Score (PAS) was useful in children with acute abdominal pain

27 The Splenoportal Index accurately predicted the presence of oesophageal varices in compensated cirrhosis

### Resource reviews
